GCE AS MARKING SCHEME

## SUMMER 2017

AS (NEW) PHYSICS AS COMPONENT 1 B420U10-1

## INTRODUCTION

This marking scheme was used by WJEC for the 2017 examination. It was finalised after detailed discussion at examiners' conferences by all the examiners involved in the assessment. The conference was held shortly after the paper was taken so that reference could be made to the full range of candidates' responses, with photocopied scripts forming the basis of discussion. The aim of the conference was to ensure that the marking scheme was interpreted and applied in the same way by all examiners.

It is hoped that this information will be of assistance to centres but it is recognised at the same time that, without the benefit of participation in the examiners' conference, teachers may have different views on certain matters of detail or interpretation.

WJEC regrets that it cannot enter into any discussion or correspondence about this marking scheme.

## MARK SCHEME

GENERAL INSTRUCTIONS

## Recording of marks

Examiners must mark in red ink.
One tick must equate to one mark (except for the extended response question).
Question totals should be written in the box at the end of the question.
Question totals should be entered onto the grid on the front cover and these should be added to give the script total for each candidate.

## Marking rules

All work should be seen to have been marked.
Marking schemes will indicate when explicit working is deemed to be a necessary part of a correct answer.
Crossed out responses not replaced should be marked.
Credit will be given for correct and relevant alternative responses which are not recorded in the mark scheme.

## Extended response question

A level of response mark scheme is used. Before applying the mark scheme please read through the whole answer from start to finish. Firstly, decide which level descriptor matches best with the candidate's response: remember that you should be considering the overall quality of the response. Then decide which mark to award within the level. Award the higher mark in the level if there is a good match with both the content statements and the communication statement.

## Marking abbreviations

The following may be used in marking schemes or in the marking of scripts to indicate reasons for the marks awarded.
cao = correct answer only
ecf = error carried forward
bod $=$ benefit of doubt

| Question |  |  | Marking details | Marks available |  |  |  | Maths | Prac |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | AO1 | AO2 | AO3 | Total |  |  |
| 1 | (a) |  |  | Amorphous (1) <br> [Short range and] long range order / regular lattice / regular array of planes / ordered layers (1) Long chain molecules (1) | 3 |  |  | 3 |  |  |
|  | (b) |  | Shape i.e. linear followed by curve flattening out (1) <br> Yield point labelled (1) <br> Elastic limit labelled (1) <br> Region where Hookes law is obeyed labelled (1) | 4 |  |  | 4 |  |  |
|  | (c) | (i) | Load/weight $=m g=5 \times 9.81[\mathrm{~N}]$ <br> Stress $=\frac{F}{A}$ / substitution correct ecf for load (1) <br> Area $=8.175 \times 10^{-7}\left[\mathrm{~m}^{2}\right](1)$ <br> Diameter $=1.0[2] \times 10^{-3} \mathrm{~m} / 1.0[2] \mathrm{mm}$ with units (1) | $1$ <br> 1 | $\begin{aligned} & 1 \\ & 1 \\ & \hline \end{aligned}$ |  | 4 | 4 |  |
|  |  | (ii) | $\text { Strain }=\frac{\Delta l}{l}=0.02(1)$ <br> $E=3.0 \mathrm{GPa}$ with units no ecf (1) |  | 2 |  | 2 | 2 |  |
|  |  | (iii) | Diameter increases by $\sqrt{10}$ (1) Diameter $=3.2[2] \mathrm{mm}$ with units (1) | 1 | 1 |  | 2 | 2 |  |
|  |  |  | Question 1 total | 10 | 5 | 0 | 15 | 8 | 0 |

| Question |  |  | Marking details | Marks available |  |  |  | Maths | Prac |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | A01 | AO2 | AO3 | Total |  |  |
| 2 | (a) | (i) |  | Rate of change of displacement / accept displacement $\div$ time | 1 |  |  | 1 |  |  |
|  |  | (ii) | Circular motion with a constant speed / accept practical example (1) <br> Object being thrown up in the air or object decelerating / accept practical example (1) |  | 2 |  | 2 |  |  |
|  | (b) | (i) | $\begin{aligned} & \text { Gradient calculated (1) } \\ & g=\left[-19.8 \mathrm{~ms}^{-2}\right. \text { with units (1) } \\ & \text { Alternative; } \\ & \text { Use of } v^{2}=u^{2}+2 a x \text { or other suitable equation of motion (1) } \\ & g=\left[--9.8 \mathrm{~ms}^{-2}\right. \text { with units (1) } \end{aligned}$ |  | 2 |  | 2 | 2 |  |
|  |  | (ii) | An attempt at an area calculation (1) Height = 11.[025] [m] (1) <br> Alternative: <br> Use of equation of motion (1) <br> Height = 11.[025] [m] (1) |  | 2 |  | 2 | 2 |  |
|  |  | (iii) | Zero |  | 1 |  | 1 |  |  |
|  | (c) |  | Shape starts and ends at zero / graph is symmetric or parabolic (1) <br> 11.025 m is the max height / gradient reduces to zero at max height (1) <br> at a time of $1.5 \mathrm{~s} /$ time of flight is 3 s (1) <br> Conclusion yes she is correct has to match with argument (1) Accept individual point checked as an alternative mark for either method |  |  | 4 | 4 | 2 |  |
|  |  |  | Question 2 total | 1 | 7 | 4 | 12 | 6 | 0 |

| Question |  |  | Marking details | Marks available |  |  |  | Maths | Prac |
